^{*}Methodology: Using ebay sold prices, US sales only. Where a Best Offer sale was made, I used the asked-for price since the BO price is not readily available.

For booster pack lots, I weighted the total average price of the booster pack by the number of packs sold (e.g., if one lot of 10 packs sold for \$30, and one single pack sold for \$10, the average is \$40/11)

I did not count any mixed lots - e.g., if a Zeus sold in a lot of other ships, or someone sold a lot of 5 DJC with 5 BC boosters, I didn't include any data for it.

For the big-value cards, I included both punched and unpunched card prices, although the vast majority sold were unpunched
